

ULTRALIGHT+

The World's lightest helmet.

ALL NEW DESIGN

MORE VENTILATION. MORE AERODYNAMICS. MORE FIT.

Ultralight + starts the new generation of the lightest helmet in the world.

None but Limar knows the technology of lightness, which began with PRO104, was revolutionized by the 160 grams of Ultralight and then extended to the Superlight range. Here is now another Limar challenge: **Ultralight +**, thanks to the larger front air vents and the mono-shell rear spoiler, is not only **more ventilated**, but it has also a **more aggressive design**, yet **maintaining the unique and exclusive Limar lightness**. It's available in Road and MTB versions.

That's very Ultralight. That's very +. That's very Limar.
